FPI Estill: Quality Vehicular Component Remanufacturing

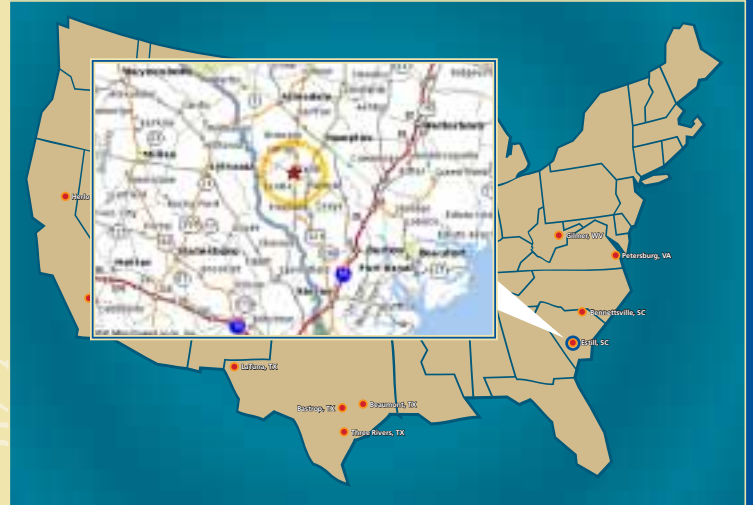

UNICOR has been remanufacturing parts for the US federal government since 1934 and has grown into the type of highly technical, sophisticated facility that exists in Estill, South Carolina.

The Federal Prison Industries (FPI) Estill facility can remanufacture a variety of vehicular components—including generators, starters and transmissions to like-new condition at substantial savings. Most of the

items that we remanufacture have been classified as “non-repairable” and are headed for a Defense Reutilization Management Office (DRMO) where they are sold as scrap. By reclaiming and remanufacturing these parts, we are able to provide quality vehicular components to our customers at substantial savings.

After receiving a failed component (core), the FPI Estill facility will disassemble the component to determine the replacement parts needed and then develop work and testing procedures to ensure that the rebuilt component meets or exceeds the original manufacturer's (OEM) specifications. Once the prototyping process is complete, the component is available to all of our customers.

State-of-the-art Machinery

The FPI Estill facility has a completely modern machine shop equipped with:

- Lathes
- Milling machines
- Welding facilities
- Metal fabrication equipment
- Burn/Bake ovens
- Paint removal systems
- Paint booth
- Heated drying booth
- AmFor Generator/Alternator load testers
- EME high amperage generator load testers

Quality jobs need quality people

The FPI Estill facility employs a Factory Manager, an Assistant Factory Manager, and a Quality Assistance Manager, as well as eight production foremen who work closely with the inmate employees. There are currently 200 inmate employees, with more available to meet customer demand.

CERTIFICATIONS

FPI Estill has passed the rigorous examination for the ISO-9001:2000 certification which is the current international standard. We regularly conduct internal process audits to ensure that all jobs are completed efficiently, effectively and in compliance with the current international standards—and our warranty program is second to none.

LOCATION

FPI Estill is located in Estill, South Carolina.
